

## **WARNING COVID DELTA VARIANT**

It is informed to all our dear students to watch out protective measures against the Covid DELTA Variant.

Delta may cause different symptoms. Cold-like symptoms, including headache, runny nose and a sore throat, while more traditional COVID-19 symptoms loss of smell, shortness of breath, fever and persistent cough have since moved down.

Delta variant has spread to more than 100 countries and become the dominant strain in most, including, as of last week, the United States. Not only is the risk of death from Delta twice as high, it is so transmissible that outbreaks in Australia have been traced back to moments of “scarily fleeting” contact.

Following is suggested to be ensured:-

- Extensive use of Mask
- Use of Hand Sanitizer
- Keep Social Distancing and avoid going to public places.
- Above all get VACCINATED, if not done so far.

**Stay Safe & Eid al-Adha from PRSA& IT**
